Healing Words Wireframe

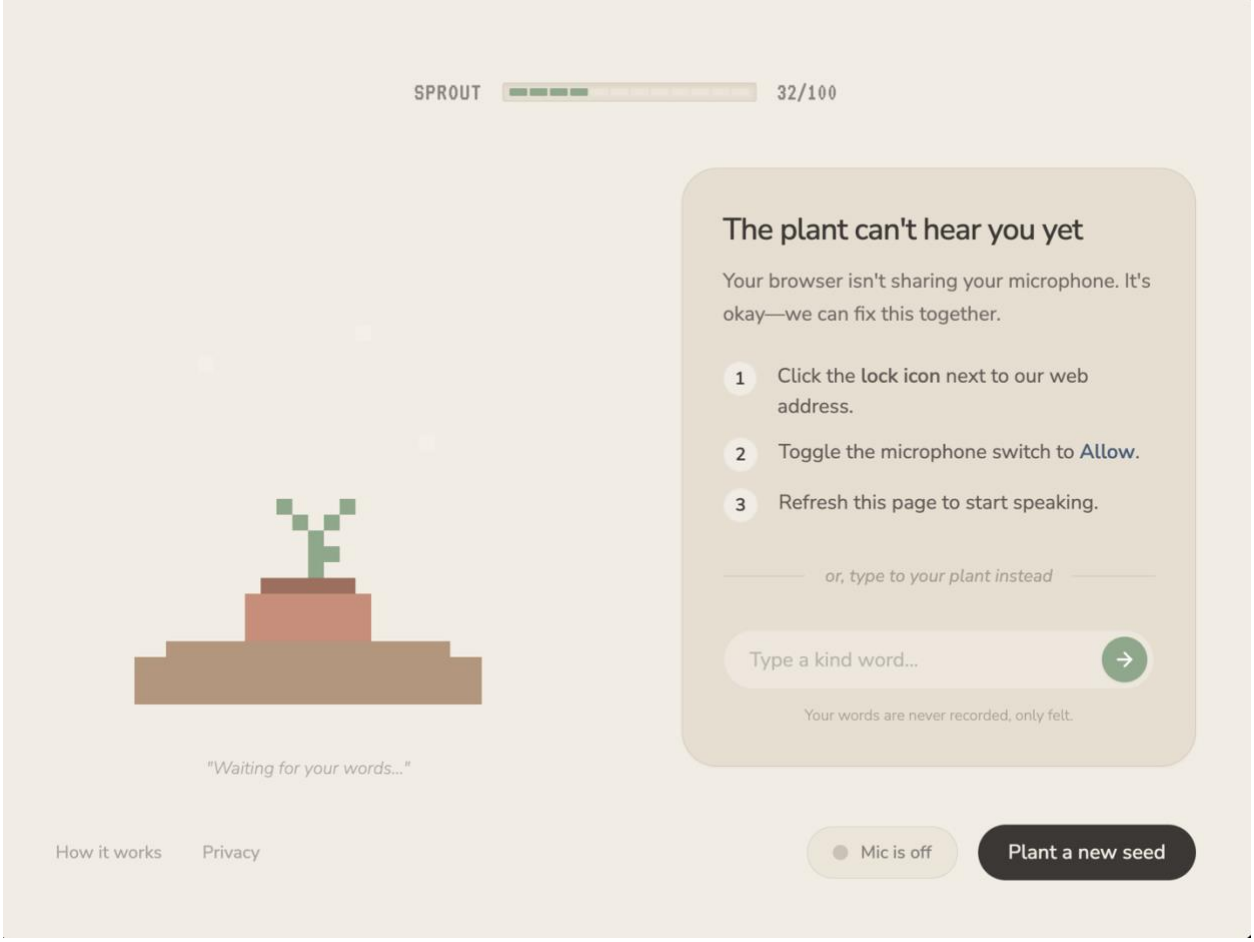

Landing page

Annotation: This page is the entry point to Healing Words. It introduces the users to the idea of a seed in a pot that grows when the user speaks kindly. It invites them to start, and the “Philosophy” and “How it works” links explain the purpose for anyone who wants context before speaking.

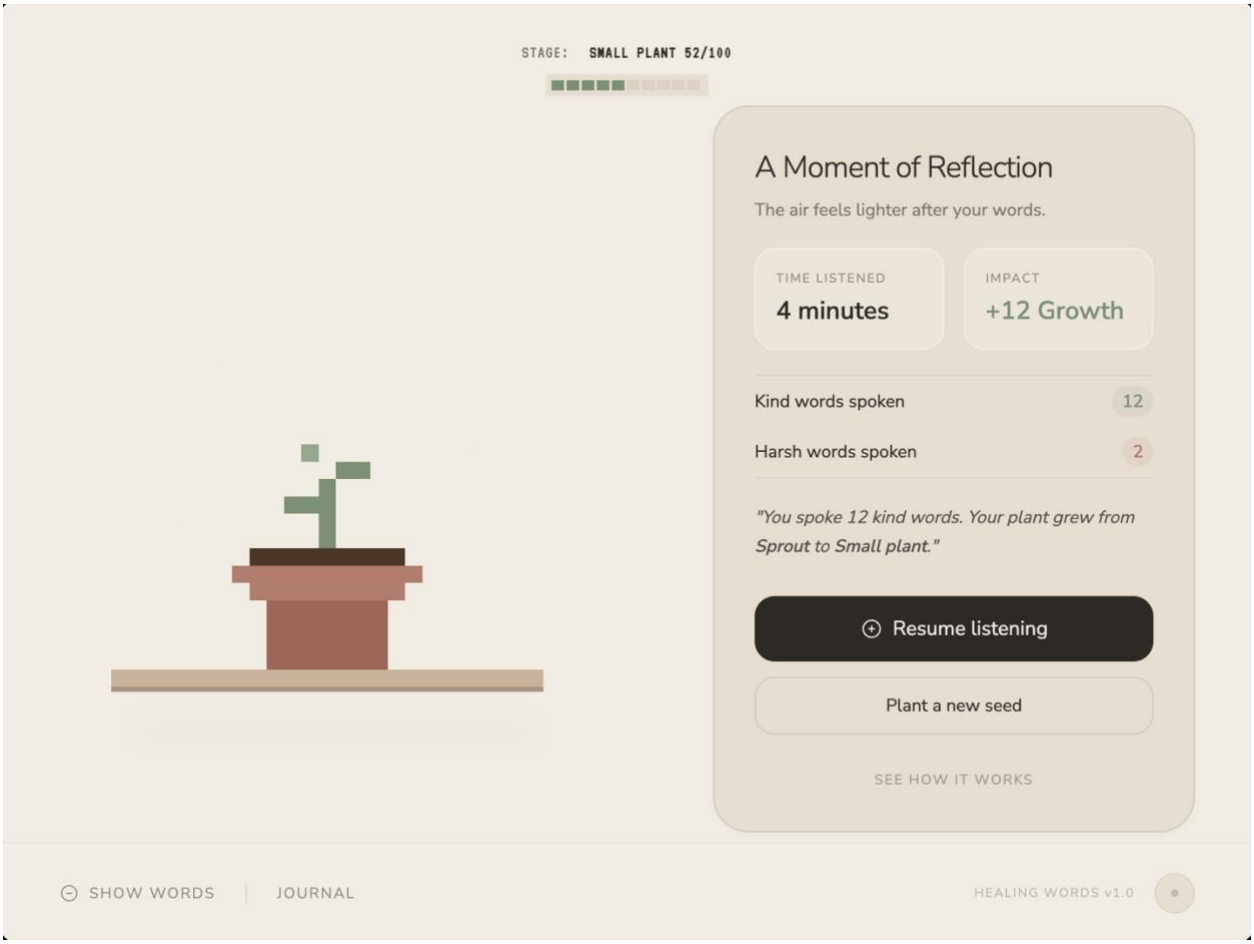

Microphone action scene

Annotation: This scene just lets users know why the mic is needed before the browser's own prompt appears, so the request feels like a choice and not a surprise. It states plainly that the user's voice is not recorded, then offers one clear "Allow microphone" button in the soft ink-blue that is reserved for the live mic, and a quiet "Not now, I'll type instead" link gives a fallback, so users who decline can still play.

Troubleshooting mic connection screen

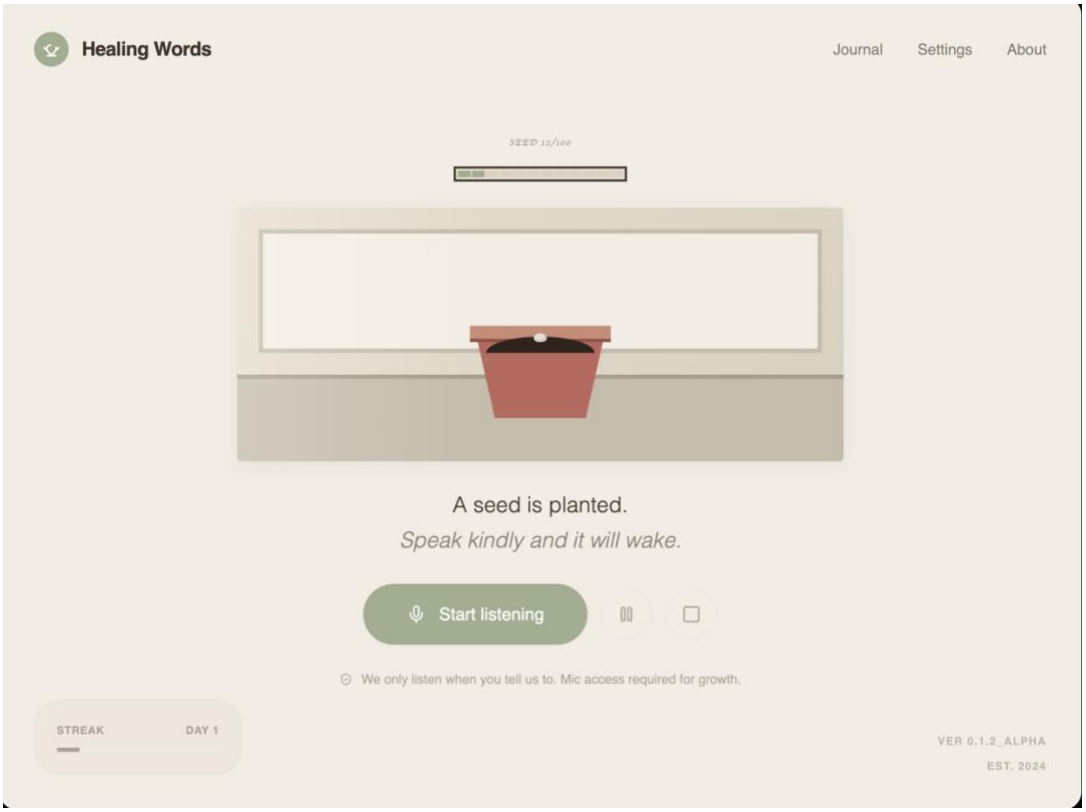

Annotation: This the fallback shown when the browser blocks the microphone. It walks the users through re-enabling it in three short steps. It also offers a “type a kind word” input so the plant can still respond without a mic. Either way, the plant stays on screen, so a permission problem doesn’t end the experience.

Session summary

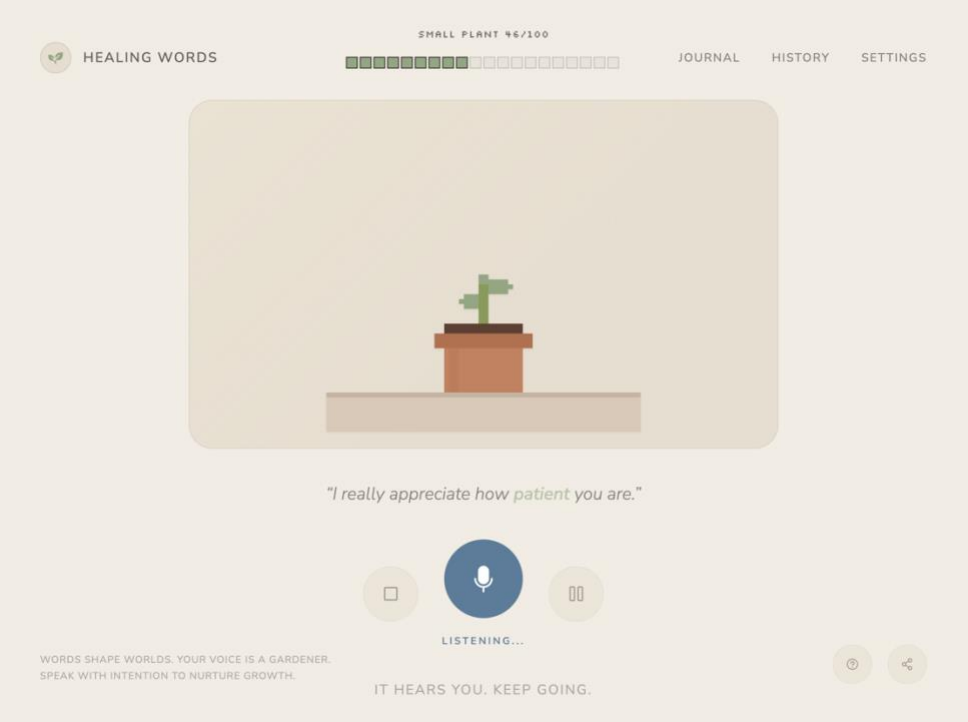

Annotation: This scene is for when the user presses “Stop”. It shows time listened, growth gained, and the count of kind and harsh words, with a one-line recap of how far the plant has come. The plant stays on screen, and “Resume listening” is the primary action, so progress is kept. “Plant a new seed” is a secondary choice, which keeps a reset from happening by accident.

Lifecycle (Growing)

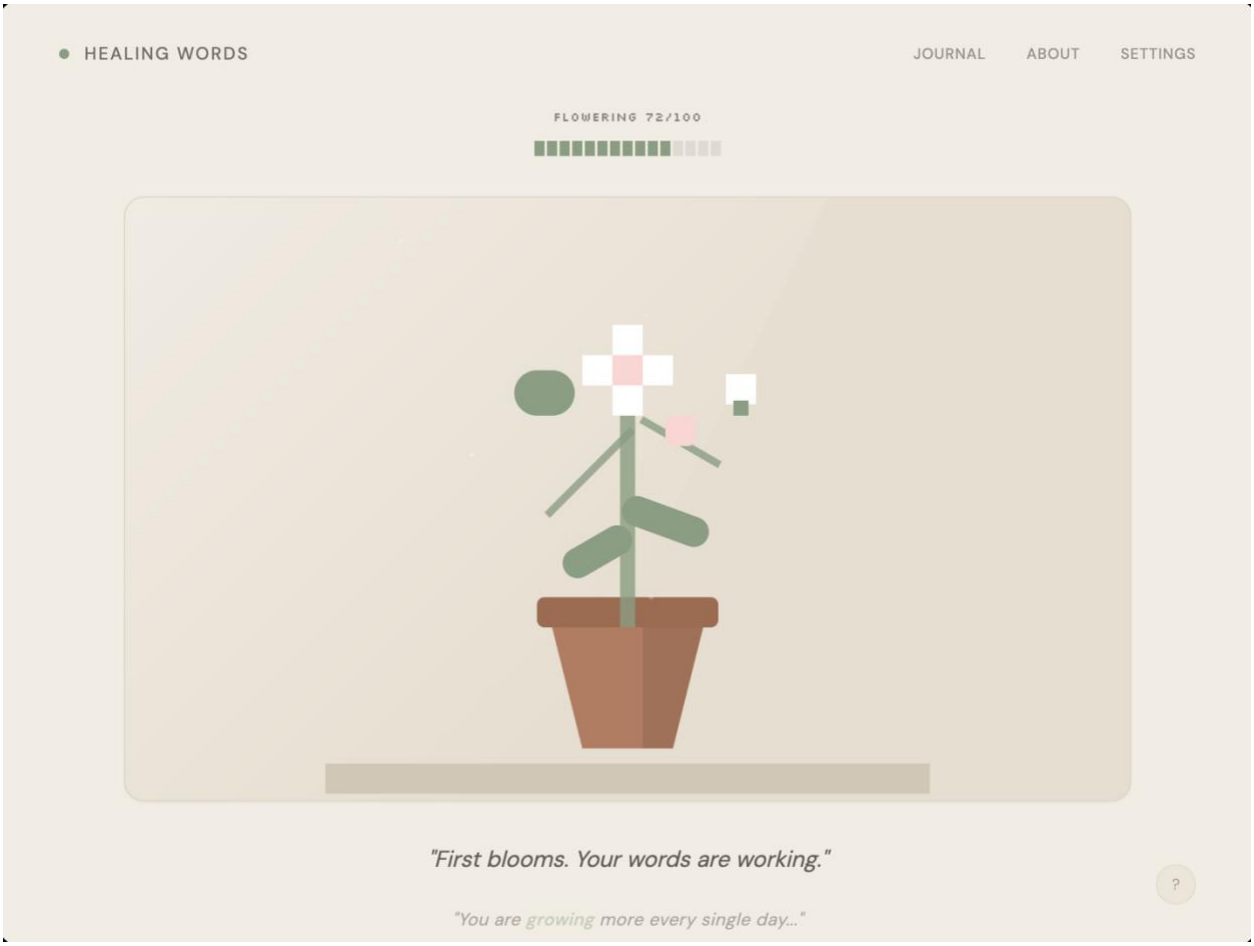

Seed stage

Annotation: This scene is where the core interaction begins, It starts with a seed in a pot, a low “SEED 12/100” health bar, and the line “Speak kindly and it will wake.” The mic controls (Start listening, Pause, Stop) are grouped under the scene, and the privacy note beneath them says the app only listens when the user chooses.

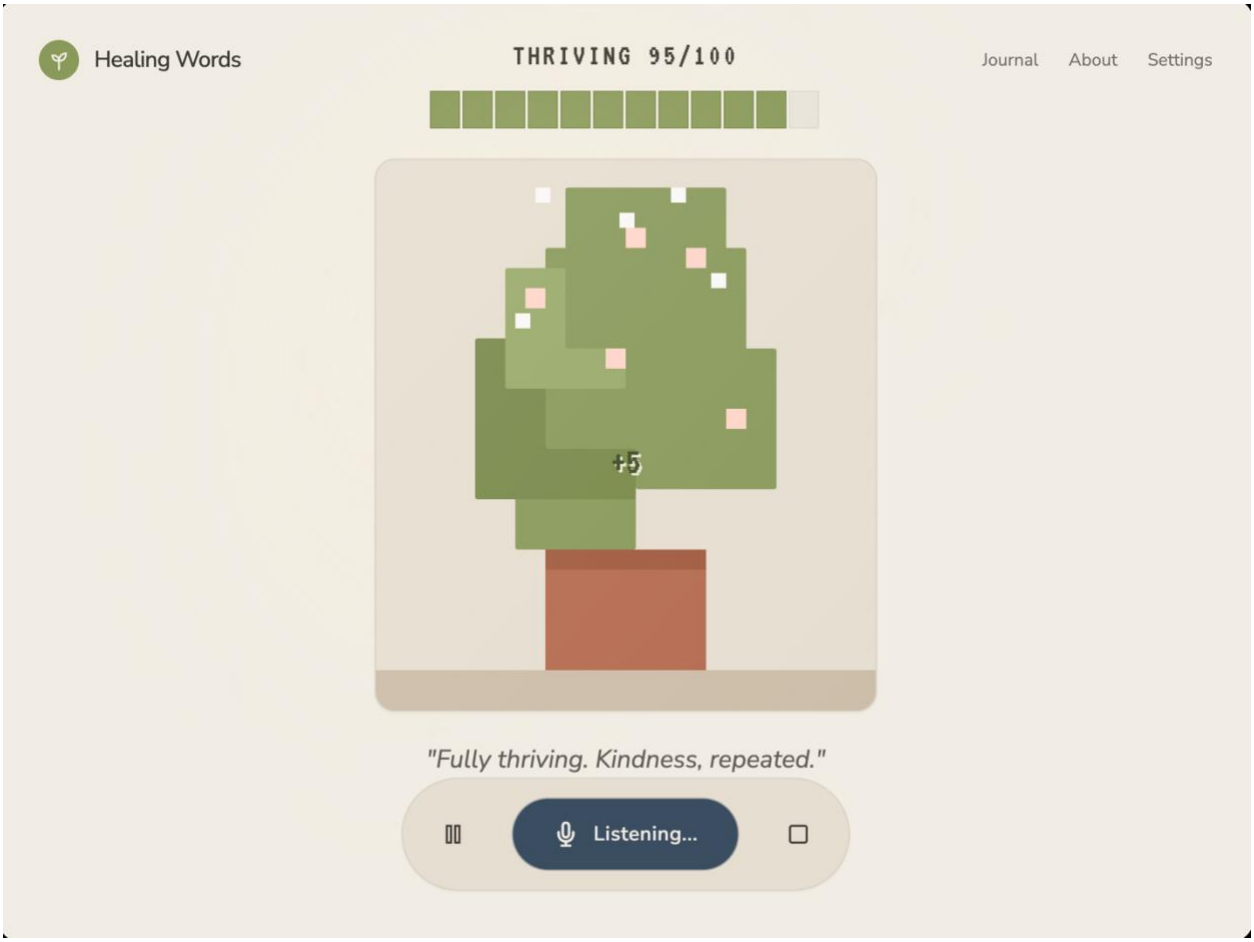

Sprouting stage

Annotation: This scene is the main interaction loop. The mic button glows ink-blue with a “Listening…” label, and the last recognized phrase appears under the plant with the kind word “patient” tinted with sage green, showing the user why the plant is growing. The “Small plant 46/100” health bar sits at the top, while the stop and pause controls are at the side of the mic button as secondary actions, and a short line of encouragement keeps the tone supportive.

Flowering stage

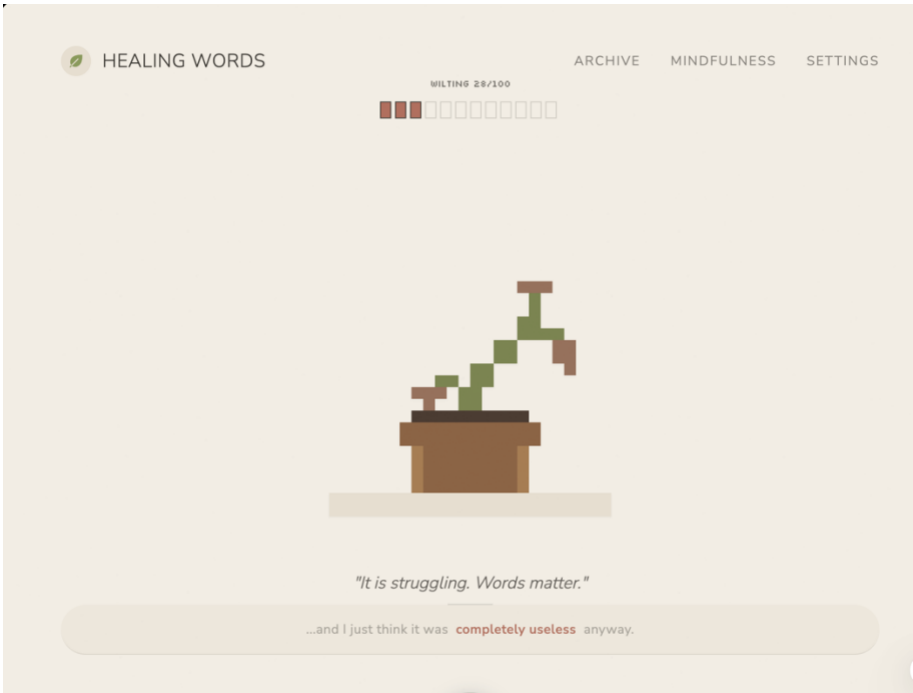

Annotation: This scene shows the milestone moment when the plant first blooms, with the message “First blooms. Your words are working” and the kind word “growing” tinted with sage green in the transcript line below.

Thriving Stage

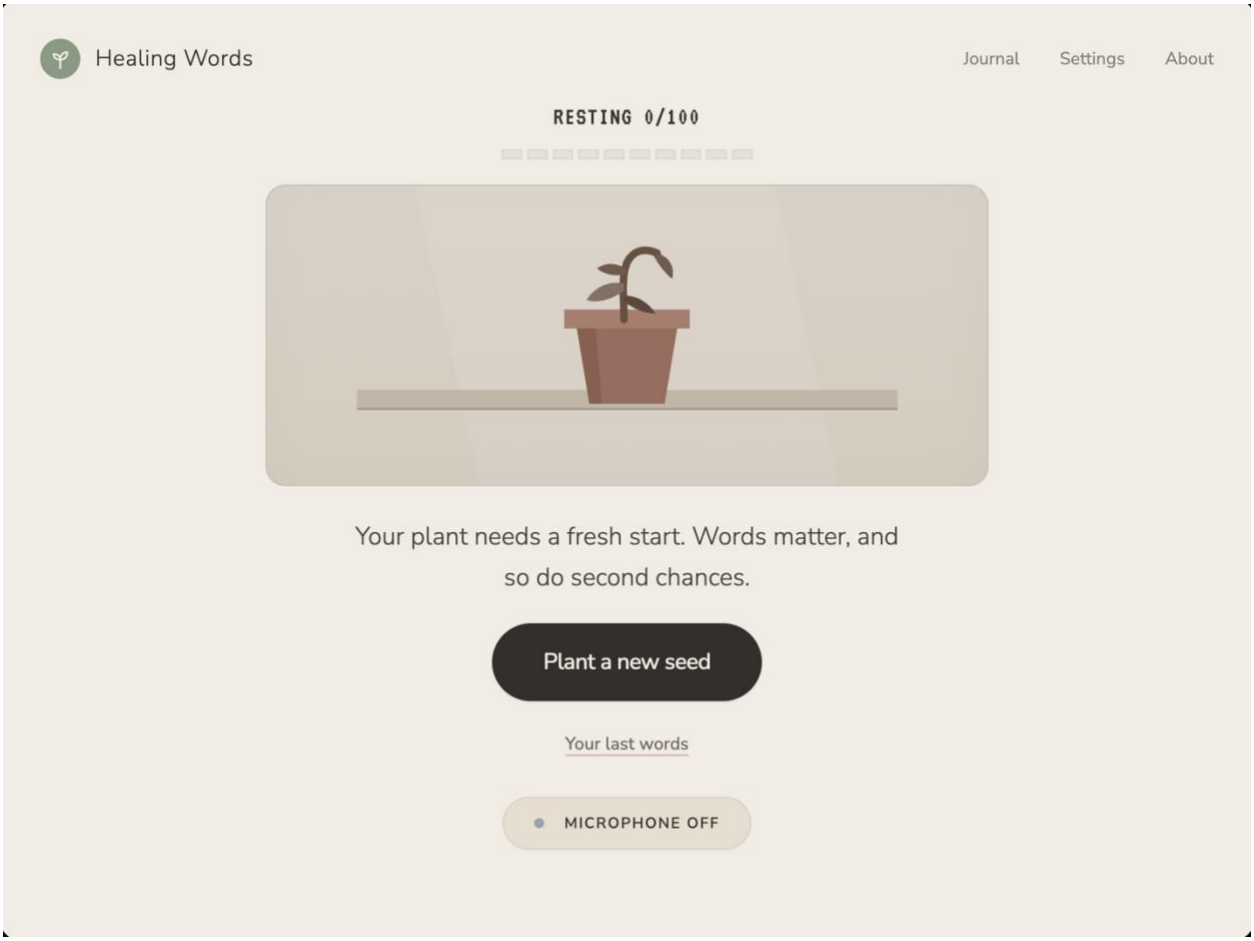

Annotation: This scene shows the peak of the growth arc, which is where the plant is a full, lush pixel tree with blossoms, a nearly full health bar, and a floating “+5” reward” text. The line “Fully thriving. Kindness, repeated.” and the stream of kind phrases “you are doing a wonderful job” are there to celebrate the effect of the user’s words. The layout needs a polish pass before sign-off: the phrase stream and the control bar overlap the pot, and the “+5” is partly hidden behind the foliage.

Lifecycle(Dying):

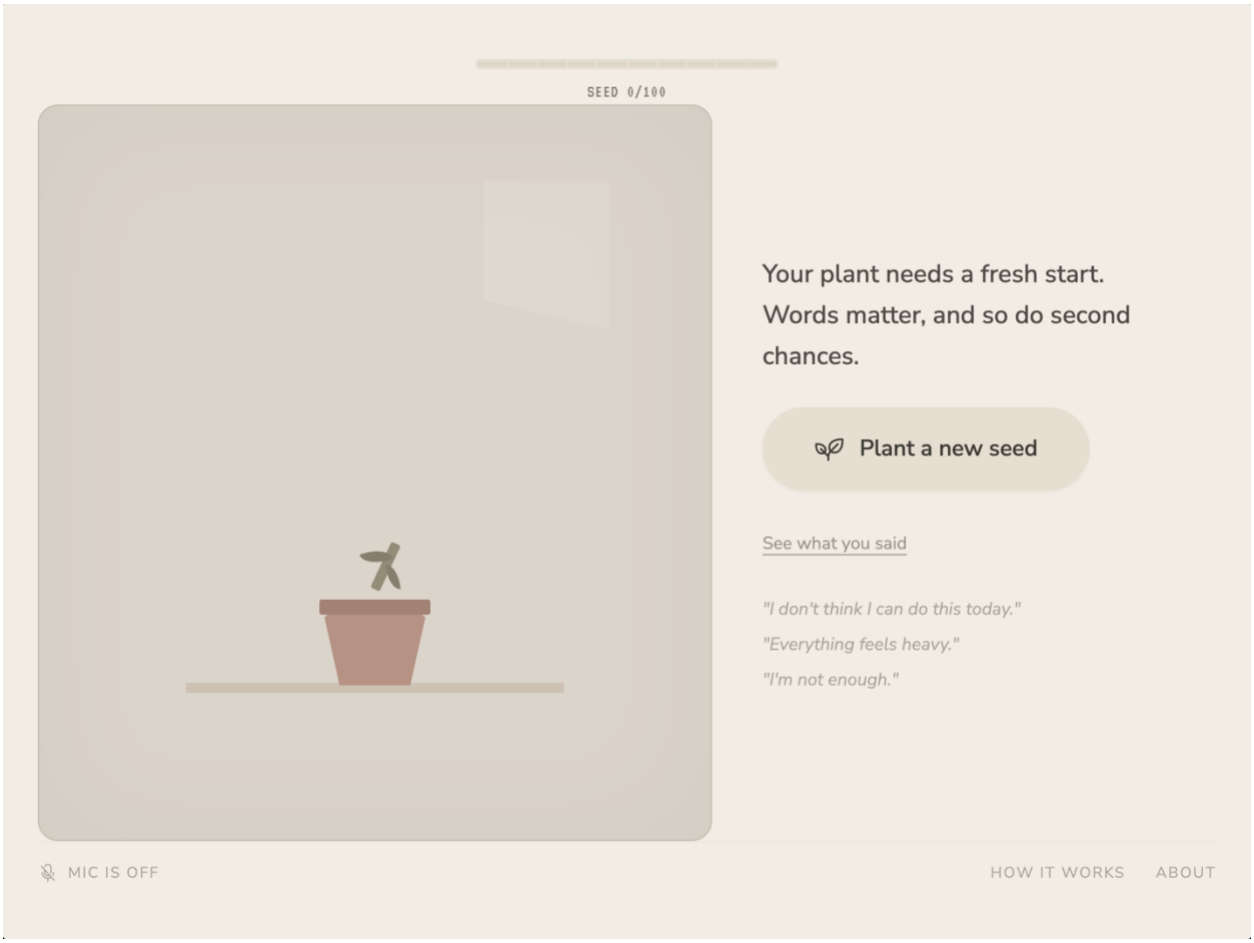

Wilting stage

Annotation: This scene shows the plant’s response to harsh words. The stem bends, the leaves turn brown, and the health bar drops to clay-colored segments, while the phrase “completely useless” is tinted clay in the transcript. The message “It is struggling. Words matter.” states the consequence, and the plant changes shape as well as color.

Dead stage

Annotation: This scene shows the plant's final state before a restart. The health bar is empty and the wilted sprout is sitting still. The screen shows a kind message "Words matter, and so do second chances" and one button, "Plant a new seed", to start again. Plus, a short list of the user's recent phrases lets them reflect on what they said. The compassionate line "Words matter, and so do second chances" and one clear "Plant a new seed" button to give users a chance to restart and a quiet "See what you said" list lets users reflect on the words that hurt the plant.

Replant stage

Annotation: This scene shows the replant stage, the scene dims and the wilted sprout goes still, with no alarms or red. A compassionate line (“Words matter, and so do second chances”) and one clear “Plant a new seed” button gives users a chance to restart.
